

Mines is a public, research university located in Golden, CO offering BS degrees, Graduate Certificates, MS, and PhD programs centered on energy, the earth, and proper stewardship of its resources.

In order to meet the ever-changing needs of today's society, the Graduate School is rapidly growing to accommodate new areas of research and expertise. In 2017, we added several new areas of graduate study, including the [Advanced Energy Systems](#) degree and our online [Space Resources](#) degree. During this exciting time of growth we seek exceptional students with backgrounds in science and engineering for all of our graduate programs.

I am writing to you today because, in the past, we have found SWE students from UW Madison have not only excelled with the rigorous coursework at Mines, they have thrived in their chosen fields after graduation. For that reason, we are offering an exclusive application fee waiver for members of SWE who plan to apply for admission into Mines' Graduate School by the Fall 2019 [deadline](#) for their preferred program.

I would appreciate if you could forward this to all graduating SWE participants or recent alumni who may be interested in applying for a PhD, Master's Thesis, or Master's Non-Thesis in any of our degree programs: **In order to obtain the Colorado School of Mines' Fall 2019 graduate application fee waiver, you simply have to email the Graduate Student Recruiter, [Molly McAndrew](#), and include SWE, UW Madison, as well as your intended graduate degree program in the subject line. You will then receive the waiver code and instructions on how to add it to your application.**
